## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4-5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakai (0544424 A1). Sakai discloses the same invention as claimed: A method for detecting the motion of an element relative to a sensor apparatus, having a detection of the direction of the motion, characterized in that as a function of the direction of motion, a measurement signal is increased or decreased at predetermined measurement intervals (col.5, lines 13-14); and that not until a predetermined threshold value is exceeded ( the least significant digit of counter 8) is a direction-of-motion signal generated; counting logic circuit 12 (see the relationship among 7, 8, 11 and 12 of Fig.1; col.5 lines 6-54); direction of rotation (col. 2 lines 35-45, col. 5 lines 23-28); vibration (col. 5 lines 29-54);

### ***Allowable Subject Matter***

Claims 3, and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***
